# TUTORIAL 7

---

1. Research available Android Intents you might want to use in your app:
  - List of common Android intents:  
  
<https://developer.android.com/guide/components/intents-common.html>
2. Start up Android Studio and open an existing project. Then add a second activity and pass messages between the two activities:
  - modify the main activity class
  - create the second activity class
  - create the layout
  - add a button that ends the second activity by calling `finish()` and returns a message to the main activity.
3. Further add a third activity so that messages circulate among the three activities.
4. (Optional) Modify an existing activity, or create a new activity, to launch a range of available Intents. Add several buttons and related click listeners that launch intents, e.g.
  - take a picture,
  - record audio,
  - show a web page,
  - etc.
