

## TUTORIAL 4

---

1. Go to <https://developer.android.com/reference/android/widget/Button.html>  
Read through the web page. Then add one more button onto the interface of your ClickMe app. By clicking this button, a new page is opened.
2. Change the style of the button. For instance, try creating a borderless button via the `borderlessButtonStyle` attribute.
3. Change the theme of the second page so that its theme is different from the first page. Try using the `setTheme` function to change the theme in the java files rather than modifying the xml files.

Should the `setTheme` function be called before calling the `onCreate` function?

Should the `setTheme` function be called before calling `setContentView` function?
